NITK Surathkal | Guide: Prof. Ram Mohana Reddy Guddeti

October 2026

Problem: form fails before you feel it

- **Silent breakdown:** posture worsens before you feel tired.
- **Real danger:** bad form strains joints — worst for older adults.
- **No coach:** you cannot watch yourself mid-exercise.
- **Our answer:** a phone buddy that watches and speaks up each rep.

Where we stand on the timeline

- September — body tracking **done**

- October — workout framework **done**

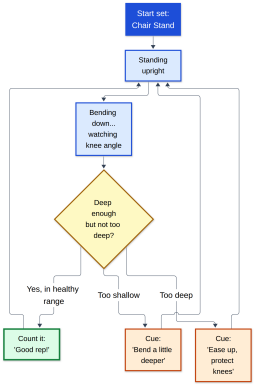

- November — lightweight on-device mode **starter**

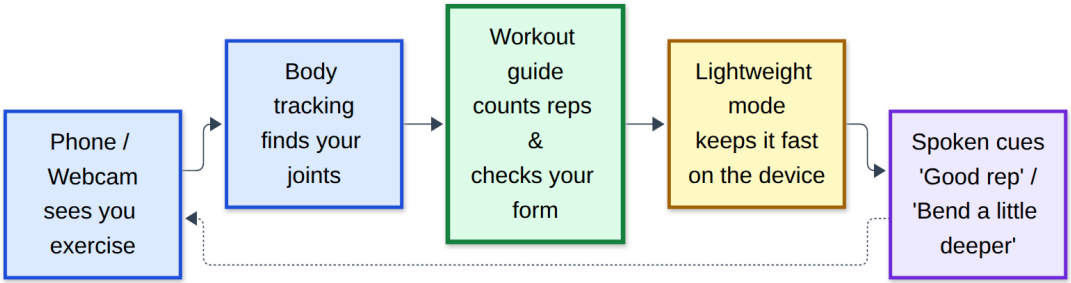

October is done: the workout framework

- **3 exercise guides,** each with a healthy bend range.
- **Automatic rep counting** that ignores small wobbles.
- Coaching message after every rep.

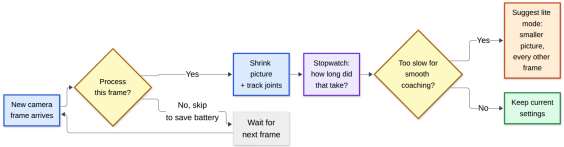

How the whole buddy fits together

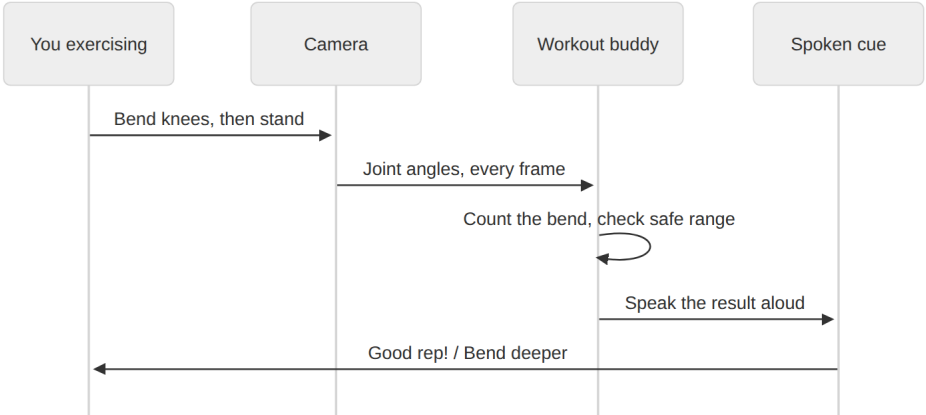

Everything runs on the device itself — no internet needed mid-set.

November starter (30%): lightweight mode

- **Lite mode:** smaller picture, every other frame.
- **Built-in stopwatch** logs time spent per frame.
- Plain-words alert when the phone runs slow.

One rep, in under a second

Bend, check, speak — all before the next rep starts.

Next work

- Finish lite mode (remaining 70%): faster models, battery testing.
- December: voice engine that **speaks cues aloud** on-device.
- Then: test everything on **real recorded exercises**.

Thank you!

Questions welcome.
